

IN THE SPECIFICATION:

Kindly amend the specification as follows:

~~Delete~~ the paragraph at Page 3, lines 17-25.

Amend the paragraph at Page 3, lines 26-34, as follows:

B1
More specifically According to an aspect of the invention, an injection mould is provided for producing three-dimensional components. The mould is characterised by a system for mould tempering having at least one groove which is arbitrarily extended between two points in the available volume of the mould for conducting a tempering medium which is intended for tempering of modules included in the mould, each groove being covered along essentially its entire extent by a cover.

Amend the paragraph at Page 8, lines 9-18, as follows:

B2
Such a cooling system 12 can also be arranged in other positions in the injection mould 1, for instance in connection with a hot-runner 18 system (~~not shown~~). The principle is the same as described above, viz. that the cooling groove is preferably arranged as close as possible to the area in the mould that is to be tempered and is covered by a cover plate which preferably consists of an adjoining module in the mould. The cover plate can also consist of a separate cover plate without any other function.
